

# MOBILE DEVELOPMENT

Arthur Ariel Sabintsev  
Lead Mobile Architect, ID.me

# MEET YOUR INSTRUCTORS

**Instructor**

Arthur Sabintsev

**Teaching Assistant**

Thomas Degry

---

## GETTING STARTED

---

# YOU

- 1. WHAT'S YOUR PREVIOUS EXPERIENCE WITH MOBILE AND OTHER PROGRAMMING IN GENERAL?**
- 2. WHY ARE YOU TAKING THIS COURSE?**
- 3. WHAT'S YOUR FAVORITE APP?**

**ONE RULE: INTERRUPT US!**

**Seriously.**

**Don't ever be ashamed or afraid of asking us questions.**

**There are NO stupid questions.**

---

**GETTING STARTED**

---

# LEARNING OBJECTIVES

---

## GETTING STARTED

---

# LEARNING OBJECTIVES: LESSON 01

- Course Expectations
- Nomenclature (iOS, Swift, etc.)
- Overview of Developer Tools
- Overview of Supplemental Learning Resources
- Pre-Work Debrief and Github
- Jumping into Xcode
- Jump into Interface Builder

---

## GETTING STARTED

---

**BY THE END OF THIS COURSE...**

you will have **created your own iOS app** from scratch and submitted it to the App Store!

*(Let that sink in for a moment)*

---

## GETTING STARTED

---

# HOW WILL I DO THAT?

- **72 hours of class** (3hrs/class \* 24 classes)
  - Lectures, Code-Alongs, Code-Reviews, Pair Programming
- **72 hours of homework** (6 hrs/week \* 12 weeks)
  - R&D, Inline Code Feedback
- **48 hours of office hours** (4hrs/week \* 12 weeks)
  - Each instructor will be available 2 hours a week.
  - 1-on-1 assistance outside of class

---

## GETTING STARTED

---

# FOOD FOUR THOUGHT

There are **2016** hours in a **12** week time period.

At the very least, you will spend **192** hours,  
or **9.5%** of your time working with Swift and iOS.

Think about what else you could accomplish in your  
life if you devoted only **10%** of your time.

---

**GETTING STARTED**

---

# **COURSE EXPECTATIONS**

---

## GETTING STARTED

---

# EXPECTATIONS & SYLLABUS

▸ Four Units (3 weeks each)

1. Translate Wireframes into Functional App Interfaces
2. Experiment with Object Oriented Swift and add Logic to iOS Apps
3. Build Apps with persistent Data and Remote APIs
4. Submit to the App Store

---

## GETTING STARTED

---

# EXPECTATIONS: UNIT 1

- Learn how to create bare-bones template projects
  - ...and extend them!
- Learn how to create multiple views (e.g., screens) using Interface Builder
- Learn basics of Swift using Playgrounds
- Learn how to save and store your code using Git
  - ...and Github

---

## GETTING STARTED

---

# EXPECTATIONS: UNIT 2

- Learn your ideas into Pseudo-Code
- Turn your Pseudo-Code into Swift code
- Learn Object Oriented Programming
- Learn Object Oriented Paradigms
  - Design Patterns
  - Data Structures
- Learn how to add interactivity
  - ...using gestures and animations
- Learn how to programmatically create views
  - ...and make sure they work on all screen sizes and orientations

---

## GETTING STARTED

---

# EXPECTATIONS: UNIT 3

- Learn how to store data
  - Temporary local storage
  - Permanent local storage
  - Permanent remote storage
- Learn how to interact with internet platforms via APIs (e.g., Networking)
- Learn how to use Open Source repositories
  - ...and how to avoid reinventing the wheel!
- Learn how to mix Objective-C code into your Swift projects
  - ...without having to know an iota of Objective-C!

---

## GETTING STARTED

---

# EXPECTATIONS: UNIT 4

- App Optimization
- Distributing your App
  - App IDs, Device IDs, Certificates, Provisioning Profiles
  - TestFlight
  - iTunes Connect
- App Store Best Practices

---

## GETTING STARTED

---

# EXPECTATIONS: EXTRA

- We don't cover everything in this class, however, we have a couple of classes set aside to teach you a topic you're interested in.
- Think about what you may want to learn that's not covered in the class.
- We'll ask you in 6 weeks.

---

## GETTING STARTED

---

# ASSESSMENTS

- › Each week, you will be assessed
  - › Homework assignment
  - › Rubric
  - › There will also be a Midterm and a Final
- › We will grade your homework assignment on a 0-2 scale using the Rubric for that week
  - › 0 = Doesn't Pass (e.g., Needs improvement)
  - › 1 = Pass (e.g., Code works, but may have a few bugs/issues)
  - › 2 = Exceed (e.g., Everything works as expected)
- › All assessments will be made available to you tonight
  - › You'll know what you're graded on from day one.

---

**GETTING STARTED**

---

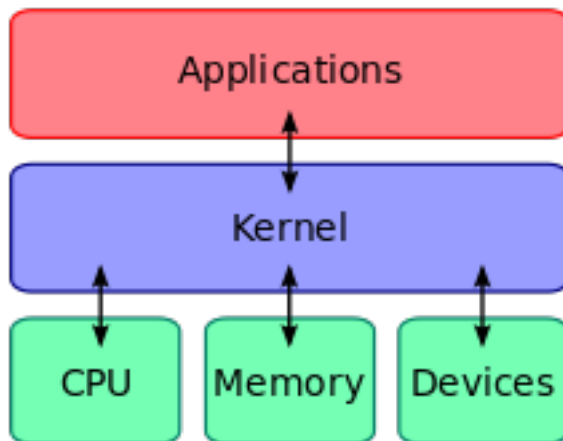

# NOMENCLATURE

## GETTING STARTED

---

# NOMENCLATURE (PT. 1)

- › OS (Operating System)
  - › Software infrastructure (Kernel) that communicates between hardware (CPU, Memory, etc.) and software (Applications)
- › iOS (“internet” or “i/me/my personal” Operating System)
  - › Operating system that works exclusively on Apple’s hardware

The image shows the "iOS" logo in a stylized, multi-colored font. The letters are outlined and filled with a gradient of colors: the 'i' is blue, the 'o' is green, the 'S' is purple, and the 'S' is red. The logo is positioned to the right of the architecture diagram.

---

## GETTING STARTED

---

# NOMENCLATURE (PT. 2)

- Programming language
  - A way to communicate (semi-)human-readable instructions to a computer to perform a certain set of actions.
- Swift
  - A programming language built by Apple to write software that works with Apple's operating systems (iOS, OS X)

---

## GETTING STARTED

---

# NOMENCLATURE (PT. 3)

- › Compiler
  - › Converts code from (semi-)human-readable instructions to machine code
- › LLVM (Low Level Virtual Machine)
  - › Converts Swift, C, C++, Objective-C, Objective-C++ code to machine code

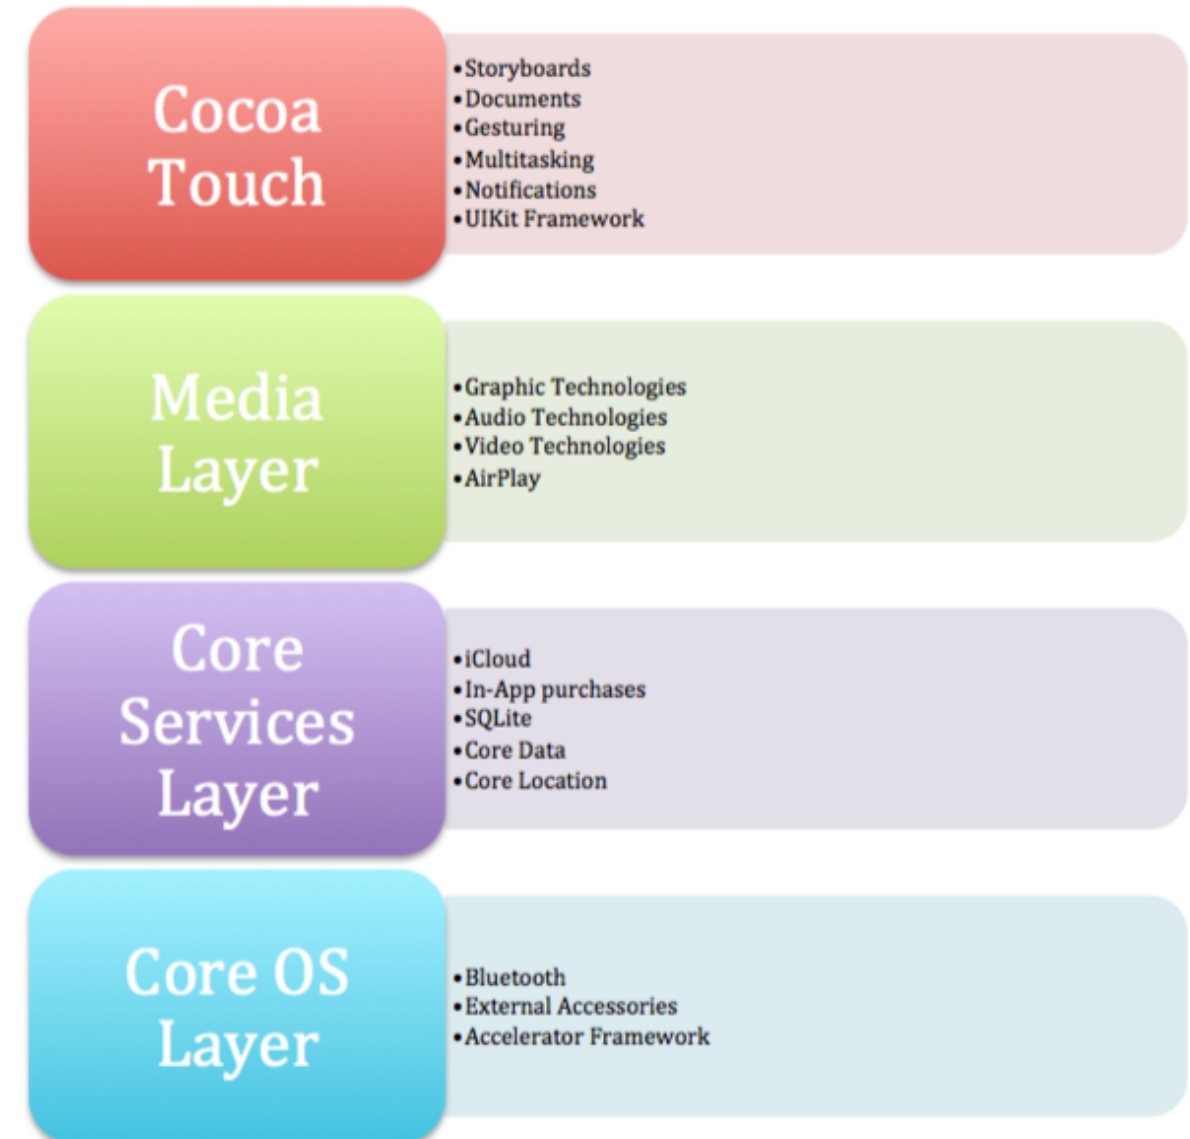

## GETTING STARTED

---

# NOMENCLATURE (PT. 4)

- › SDK: Software Development Kit
  - › A library, or collection of software tools that are built to perform multiple operations to achieve complex functionality without needing to know the inner-workings of the code, also known as the implementation.
- › Cocoa Touch
  - › A collection of software that allows you to build apps for iOS
    - › Foundation
    - › UIKit
    - › Dozens of other libraries

## GETTING STARTED

# NOMENCLATURE (PT. 5)

- API: Application Programming Interface
  - The method in which one piece of software (e.g., Twitter) exposes its functionality to another piece of software (e.g., Your App).
  - This exposed functionality can then be used to transfer data between two pieces of software via a secure channel (e.g, Lincoln Tunnel;).

---

## GETTING STARTED

---

# NOMENCLATURE: SUMMARY

- › iOS is an operating system that is used to communicate with hardware built by/for Apple.
- › To make iOS apps, one must program in Swift (or Objective-C) and make use of the APIs in the Cocoa Touch framework.
- › The LLVM compiler converts Swift code to machine code (e.g., something that iOS can understand), and executes your application.

---

**GETTING STARTED**

---

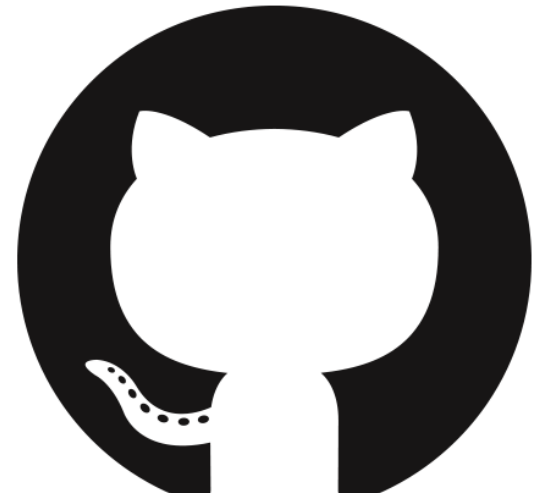

# DEVELOPER TOOLS

## GETTING STARTED

---

# DEVELOPER TOOLS

- › Xcode
- › iOS Simulator
- › Github
- › Slack

---

## GETTING STARTED

---

# DEVELOPER TOOLS: XCODE

- › Integrated Development Environment (IDE)
  - › Write source code
  - › Create views by dragging and dropping elements
  - › Clean, Build, Compiler, Run your App
  - › Debug your App

You will spend most of your time working with this application.

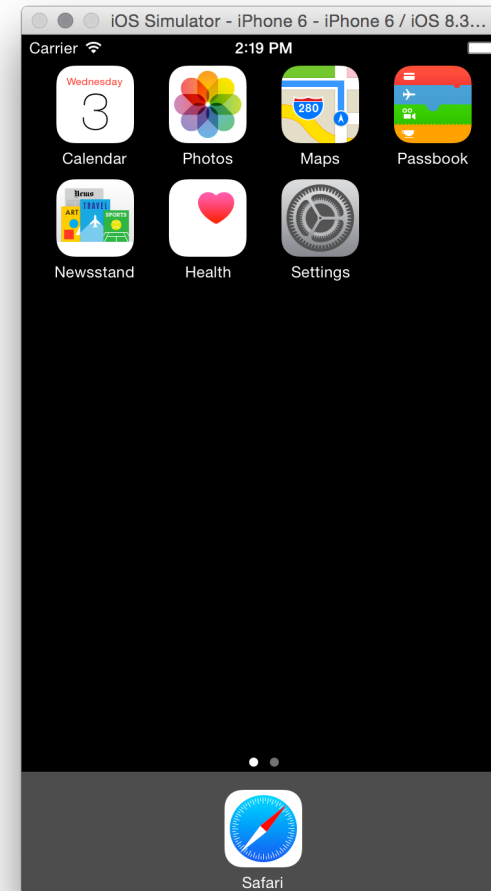

---

## GETTING STARTED

---

# DEVELOPER TOOLS: IOS SIMULATOR

- › Simulate your app on your computer as you build it
  - › General functionality
  - › Multiple device resolutions
  - › Location
  - › Gestures
  - › etc

---

## GETTING STARTED

---

# DEVELOPER TOOLS: GITHUB

- Github is many things:
  - Version Control System
  - Collaboration Tool
  - Social Network

...you should already know all of this, as it was the part of the pre-work assignment :)

---

## GETTING STARTED

---

# DEVELOPER TOOLS: SLACK

- Group communication tool
  - Includes:
    - Public Group Chats
    - Private Group Chats
    - Private Direct Messaging
    - File Upload

Think of it as *Facebook Messenger on steroids!*

**GETTING STARTED**

---

# **SUPPLEMENTAL LEARNING RESOURCES**

---

## GETTING STARTED

---

# LEARNING RESOURCES

### ▸ Books

- Official General Assembly MOB GitBook
  - <http://mobbook.generalassemb.ly/>
- Official “Swift Programming Language”
  - [iBook](#)
  - [Website](#)

### ▸ Websites

- Stack Overflow (<http://www.stackoverflow.com>)
- Ray Wenderlich (<http://www.raywenderlich.com/swift-language-tutorials>)
- NSHipster (<http://www.nshipster.com>)

---

**GETTING STARTED**

---

# **PRE-WORK DEBRIEF: GIT & GITHUB**

---

## GETTING STARTED

---

# GIT & GITHUB

- › <http://www.github.com>
- › Create a free Github account
- › Download Github Mac app
- › **Clone** your first repository
- › **Pull** your first set of commits from the cloned repository
- › **Push** a new repository
- › **Commit** your first change

## GETTING STARTED

---

# DEV WORKFLOW: XCODE & INTERFACE BUILDER

---

## GETTING STARTED

---

# DEV WORKFLOW

- Learn about the different app templates
- Create a blank iOS App
- Learn how to add views in Interface Builder

---

**GETTING STARTED**

---

**CODE ALONG**

# GETTING STARTED

---

## EXERCISE

### KEY OBJECTIVE(S)

---

Learn the flow of building a new project. Add UI elements to project and modify their properties.

### TIMING

---

- 15 min* 1. Work with a partner
- 5 min* 2. Debrief

### DELIVERABLE

---

Create a new project. The view controller should display text that contains a short bio. The project should have a button with the text “Goals”.

---

**GETTING STARTED**

---

**HOMEWORK**

---

## GETTING STARTED

---

# HOMEWORK

- In case you didn't do this already, you definitely should:
  - Read 'Understanding Mobile Devices'
  - Read Chapter 1 in the Official MOB Gitbook
- The real homework assignment:
  - Read Chapter 2 in the Official MOB Gitbook
  - Hands-On Git tutorial by Code School (<https://try.github.io/>)
    - This uses the Terminal app, which isn't required for this class, but will give you a better understanding of Git and how it works.

---

## GETTING STARTED

---

# Q&A
